

MOCH. NOOR ALFAN OCTAVIAN ANWAR

+62 851-7212-9020 • mochnooralfan@gmail.com • [GitHub](#) • [LinkedIn](#)

Software Engineer with more than 3 years of experience developing, maintaining, and supporting enterprise applications across backend, frontend, database, and infrastructure layers. Experienced in delivering end-to-end solutions for property management, smart manufacturing, and Manufacturing Execution System environments.

Proficient in C#, ASP.NET Core, Blazor, React, TypeScript, and SQL Server, with hands-on experience in system integration, application modernization, testing, and production support. Strong in root-cause analysis, debugging, performance improvement, and translating complex business requirements into reliable, maintainable software solutions.

SKILLS

Languages: (*proficient*) C#, SQL, TypeScript, JavaScript, (*familiar*) Java, Go, Dart, VB.NET

Technologies: ASP.NET Core, REST API, Entity Framework Core, Java Spring Boot, NestJS, Prisma, React, Vue.js, Blazor WebAssembly, WPF, SQL Server, Oracle Database, PostgreSQL, Redis, Docker, Kubernetes

Others: Git, Vercel, Postman, Figma, Supabase

EDUCATION

Universitas Negeri Malang

2015 – 2019

Bachelor's Degree in Informatics Education

GPA: 3.44 / 4.00

EXPERIENCES

Software Engineer — PT LG Sinar Mas Technology Solutions

June 2025 – Present

- Support the development, maintenance, and enhancement of Manufacturing Execution System and smart manufacturing applications.
- Monitor manufacturing applications and automated equipment integrations to identify operational, performance, and data-processing issues.
- Analyze user requirements and implement change requests based on production and business needs.
- Develop and maintain application components using C#, WPF, BizActor, And SQL Server Database.
- Investigate production incidents, perform root-cause analysis, and provide appropriate technical solutions.
- Support system testing, feature validation, deployment preparation, and production rollout activities.
- Contribute to application modernization initiatives involving Java Spring Boot REST APIs and React-based frontend applications.
- Collaborate with engineers, manufacturing users, and other stakeholders to understand equipment workflows and production processes.
- Prepare and maintain technical documentation, system references, and user manuals for operators and technicians.
- Participate in equipment configuration, system integration, and validation activities for new manufacturing implementations.

.NET Developer — PT Realta Chakradarma (under PT Code Development Indonesia)

May 2023 – May 2025

- Developed and maintained BimaSakti, an enterprise property management application, using C#, ASP.NET Core, Blazor WebAssembly, and SQL Server.
- Delivered end-to-end features covering backend services, business logic, database operations, user interfaces, reporting, and application integration.
- Developed modules related to tenants, property units, agreements, invoices, charges, utility meters, deposits, digital signatures, and email distribution.
- Designed and implemented REST APIs, validation rules, database queries, and asynchronous business processes.
- Created operational and financial reports using FastReport, including dynamic layouts, grouping, calculations, and digital signature integration.
- Implemented background processing for scheduled and long-running business operations.
- Developed Excel import processes, temporary-table workflows, and business-data validation mechanisms.
- Diagnosed and resolved application bugs, data inconsistencies, and performance bottlenecks.
- Improved existing code through refactoring, query optimization, and reusable component development.

- Managed application deployment and infrastructure using Docker, Kubernetes, Ocelot API Gateway, and GitHub Actions.
- Conducted functional testing, code reviews, and validation to maintain application quality and reliability.
- Collaborated with business users and cross-functional teams to gather requirements, provide progress updates, and deliver application enhancements.

.NET Developer Trainee — PT Code Development Indonesia

November 2022 – April 2023

- Completed an intensive full-stack .NET development program covering backend, frontend, database, and collaborative software development.
- Developed a modular hotel management application in collaboration with other participants.
- Designed database structures and implemented business processes using SQL Server.
- Built REST APIs using ASP.NET Core and Entity Framework Core.
- Developed interactive user interfaces using Blazor WebAssembly.
- Integrated the hotel module with other application modules through APIs and shared business workflows.
- Performed application testing, debugging, and API validation using Postman.
- Collaborated through Git and GitHub using shared repositories and team-based development workflows.

Technical Support Engineer — PT Hash Rekayasa Teknologi

December 2020 – January 2022

- Analyzed and resolved technical issues affecting web applications, networks, and customer operations.
- Investigated reported bugs, reproduced application issues, and documented technical findings.
- Provided technical guidance and troubleshooting support to customers.
- Coordinated with relevant technical teams to escalate and resolve complex incidents.
- Monitored application issues and contributed to maintaining system availability and reliability.
- Ensured reported cases were handled accurately and within the required resolution period.

PROJECTS

Tumbuh Tahu

2026

A child-development platform comprising a cross-platform user application and a dedicated administration panel for managing its content and operational data.

Technology Stack: TypeScript, Expo, Vue 3, Nuxt 3, Supabase, Vercel

- Built a responsive application for web, Android, and iOS using Expo and React Native.
- Developed child profiles, interactive milestone checklists, and evaluation results with color-coded development statuses.
- Created searchable educational content and stimulation activities organized by age group.
- Built a Nuxt administration panel with role-based access and CRUD controls for milestones, educational materials, stimulation activities, age ranges, administrators, and user feedback.
- Integrated Supabase for production data management and implemented CSV templates and bulk data imports for editable content.

[Live Application](#)

Hotel Realta

2023

A collaborative modular hotel management application developed during the .NET Developer training program. Responsible for developing the Hotels module and integrating it with other modules.

Technology Stack: C#, ASP.NET Core, Entity Framework Core, SQL Server, Blazor WebAssembly, Postman

- Developed hotel-related business processes and backend APIs.
- Created and managed relational database structures.
- Developed user interfaces using Blazor WebAssembly.
- Integrated the Hotels module with other modules through REST APIs.
- Collaborated with team members using GitHub.

[Database Repository](#) [Backend Repository](#) [Frontend Repository](#)

World War II Learning Application

2022

A mobile learning application providing educational content, articles, and videos about World War II.

Technology Stack: Dart, Flutter
